About

Client feedback on factor analysis tool

We believe that design and software can help bring ICANN's multi-stakeholder model to a broader audience. We also believe we can improve the process by which stakeholders contribute to policy discussions. We've been testing out that thesis with experiments that we've written about over at ICANN Labs. We've run several of these experiments over the last few months and spoken to a broad spectrum of the ICANN community.

Client feedback on factor analysis tool

As we enter the next stage of the project, we are excited to test our ideas in a live environment and with a phased release plan. We are in the very early stages of rolling out a new ICANN.org site, and we need your feedback.

We'll be road-testing the new site during the Buenos Aires meeting and talking to as many people as possible about it. We'll take that feedback and incorporate it into our product development process.

We will be iterating on a public beta of the new ICANN.org website throughout December and January. We'll run it in parallel to the existing ICANN.org site, so we don't disrupt your ability to use the site you're familiar with while we test new ideas. During the public beta, some parts of the new ICANN.org site may not be fully functional. That's because we want to learn from as many users as poVssible, as early as possible.

If all goes well, we will look to launch a new ICANN.org in February 2014. That will not be the end of the process, however. This site will continue to iterate - with new experiments and tools - which we'll test on ICANN Labs before we graduate them to the new ICANN.org.

While science entertainment programs are fun and interesting as well as informative, I'm of the opinion that there is not to be found ways to make the courses needed to master STEM courses.

lorem ipsum delor amet testing

By Jeanine Harriman

We believe that design and software can help bring ICANN's multi-stakeholder model to a broader audience. We also believe we can improve the process by which stakeholders contribute to policy discussions. We've been testing out that thesis with experiments that we've written about over at ICANN Labs. We've run several of these experiments over the last few months and spoken to a broad spectrum of the ICANN community.

The early work centered on issues involving the following themes: communication, education, conversation and discovery. Essentially, how newcomers to ICANN can learn more about the organization's work, process, and communities; how they can contribute; and how they can stay engaged over time.

We have shared what we've learned in meetings, through the Digital Engagement Advisory Board, in blog posts , and on Twitter . We are now applying what we have learned from this testing toward the development of a new ICANN.org website.

Beta Testing and Phased Release Plan

As we enter the next stage of the project, we are excited to test our ideas in a live environment and with a phased release plan. We are in the very early stages of rolling out a new ICANN.org site, and we need your feedback.

We'll be road-testing the new site during the Buenos Aires meeting and talking to as many people as possible about it. We'll take that feedback and incorporate it into our product development process.

We will be iterating on a public beta of the new ICANN.org website throughout December and January. We'll run it in parallel to the existing ICANN.org site, so we don't disrupt your ability to use the site you're familiar with while we test new ideas. During the public beta, some parts of the new ICANN.org site may not be fully functional. That's because we want to learn from as many users as poVssible, as early as possible.

If all goes well, we will look to launch a new ICANN.org in February 2014. That will not be the end of the process, however. This site will continue to iterate - with new experiments and tools - which we'll test on ICANN Labs before we graduate them to the new ICANN.org.

Questions for the Community

Here are some of the questions we have related to the new ICANN.org experience that we'll be testing in Buenos Aires and beyond:

- 1. How well does the new ICANN.org site experience address the needs of newcomers to ICANN?
- 2. What do you think of the organization of information on the new site? Are things where you would expect to find them? What's missing?
- 3. What would you expect from a "personalized" ICANN.org experience? You can email your thoughts to icannlabs@neo.com, contact us on Twitter at @ICANN-Labs, or find us at the ICANN booth at the Buenos Aires meeting.
